

This assignment was a bit frustrating for me and for my partner, Adrian. On the List header file, there was some parts in which we kept missing a county because we were not sure of the way that the function should have been written to not miss the counties.

When I tried to compile my code, I kept getting a “Segmentation fault” error. I made sure all of the files provided were in read and write, but I still kept getting that error. I closed out the studio code app and restarted my computer, but I still could not compile my code. So, I had to send Adrian my work to have him check it on his computer.

Me and my partner split the work, and we checked each other’s work as well to make sure we were on the same page. We would’ve preferred to not had to work on this program over spring break.
