

Program 1 – Reflection

This program was not my favorite. I feel confident about the basic loop and basic functions.

However, the parameters were tricky and long, so I don't feel too confident about it, but it compiles and runs so I am confident about it enough. Aside from its length and trickiness, I felt that this assignment was alright. As a side note, I have a Mac, so the runProgram.bat file does not work on my system, as you stated on the program one details.

My partner was Adrian Gonzalez, and he was very good in the splitting of the work and he helped me on the parts where I had confused myself. However, the program felt lengthy even with splitting the work. So, perhaps it would have been a lot longer if I had been the only one working on it.
